

Billit – Senior .Net developer

Will you join the development team behind our product?

Billit continues to grow and we're still brimming with plans. That's why we're expanding our team with someone who can keep our product technically robust, reliable and scalable through solid backend engineering.

What does a .NET Developer do at Billit?

You'll work closely with the product team and fellow developers to translate analyses into technical designs and top-tier code: well-thought-out, scalable and - of course - thoroughly tested.

To be specific:

- You maintain, expand and test applications in C# and .NET.
- You transform functional analyses into technical designs and implement them in clear, high-quality code.
- You work with [ASP.NET](#) MVC and manage SQL databases.
- You conduct peer code reviews and promote best practices within the team.
- You actively contribute to technology decisions and enjoy scaling with new developments.

Who are you?

- You have a keen eye for code quality and think in terms of scalability and maintainability. You think five steps ahead and ensure that what you build works beyond just today.
- You're passionate about backend development and feel right at home when the logic is sound and the code is clean.
- You're fully committed to the best end result: clear communication, satisfied (internal) customers—just “good” isn't good enough.
- You take initiative and adapt quickly to new environments and teams.
- You thrive in an environment that's constantly evolving.
- You don't like to stand still and stay up to date on new developments and technologies.
- We work in a hybrid model, but you'll typically be able to be physically present 3 days a week.

What skills do you already have?

- You have at least 3 years of experience as a .NET developer.
- You're proficient in C#, .NET and [ASP.NET](#) MVC.
- You have in-depth knowledge of SQL databases.
- Knowledge of React is a plus.

- Specific degree? It doesn't really matter to us. A creative mind and a strong track record are just as important to us.

What do we bring to the table?

- Impact: You'll be working on a product used every day by tens of thousands of entrepreneurs, from freelancers to Fortune 500 companies.
- Growth: A generous training budget, in addition to standard internal training programs, and the freedom to choose your own path.
- Flexible working hours, great colleagues, and a culture focused on progress and quality.
- A bright workspace near the Gent Dampoort train station.
- In addition to your statutory leave, you'll have 12 ADV days to schedule as you wish (40-hour workweek).
- Last but not least: yes, we're also (relatively) young and dynamic and we'll pay you an attractive salary that reflects your skills and dedication.

Interested in working at a fast-growing scale-up where autonomy, responsibility and code quality are key?
